Available packaging:

20.0 kg

Product description

The Garvo 5085 dwarf goat and buck pellet is specially developed for dwarf goats and bucks and provides a tasty, high-quality supplement to daily roughage. With a pellet size of 3 millimeters, it is ideal for both young and adult animals. Thanks to its higher energy content, the pellet supports the active lifestyle of dwarf goats and bucks and helps keep them warm while maintaining their natural playfulness.

This pellet is more than just feed: it is a complete supplement that supports the immunity of your dwarf goats and bucks. Daily feeding contributes to healthy vitality and helps your animals perform at their best, from playful young goats to the daily activities of adults.

The Garvo 5085 dwarf goat and buck pellet is also enriched with calcium and a balanced calcium-to-phosphorus ratio, which helps maintain healthy urinary tracts and reduces the risk of kidney

Questions about this food?

stones. You can feed with confidence, knowing you are contributing to the health and well-being of your animals.

Choose the Garvo 5085 dwarf goat and buck pellet (3mm) and give your dwarf goats and bucks a tasty, nutritious, and energy-rich pellet they love – supporting their vitality, immunity, and overall well-being!

Feeding advice

- General guidelines: Always provide plenty of fresh drinking water. Ensure goats always have access to roughage such as hay, grass, or straw. Provide enough feeding places; goats have a strict hierarchy to ensure all get enough. Give little to no maize; too much energy can make animals overweight. Do not feed sheep feed; goats have different vitamin and copper requirements. It is possible to offer a lick block for additional minerals and salt.
- Daily feeding amounts: Adult goats eat approximately 2% of their body weight (dry matter) per day. Maintain a ratio of about 2/3 roughage and max 1/3 concentrate. Feeding guidelines by type of goat: Dwarf goat (<30 kg): 150–250 g per day. Small goat (30–60 kg): 250–350 g per day. Large goat (>60 kg): 350–450 g per day.
- Pregnant and lactating goats: Goats need more feed at the end of pregnancy and start of lactation. Late pregnant goats (from 1 month before kidding): approx. 0.5% extra of body weight per day. Lactating goats: approx. 1% extra of body weight per liter of milk per day.
- Young goats: Young goats must receive colostrum; allow them to drink from the mother for at least 8 weeks. Young goats can start eating feed and hay from around 14 days of age. From 8 weeks: feed approximately 1.5% of their body weight daily.

Composition:

maizemash, alfalfa, wheat, beet pulp, barley, palm kernel meal, maize gluten feed, rape seed extracted, apple molasses, linseed expeller, soya dehulled extracted toasted, lime stones, soja oil, shell grit, lecithin
